

Granny and Grandad get their vaccine

To stop people getting sick from COVID-19, doctors and scientists created a vaccine.

Older people like grannies and grandads are more likely to get sick from COVID-19, so they get offered the vaccine before other grown-ups.

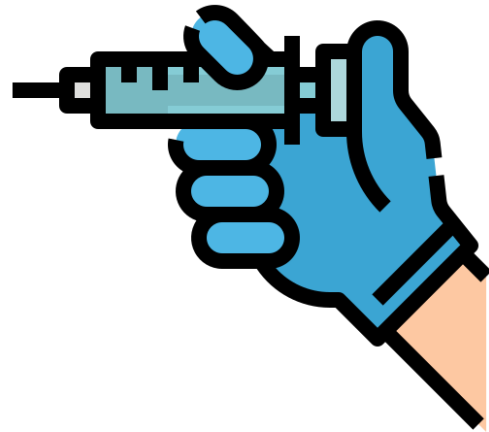

Granny and Grandad get a phone call or text from the doctor, giving them an appointment to get the vaccine.

On the day of their appointment, Granny and Grandad put on their face masks and go to the doctors.

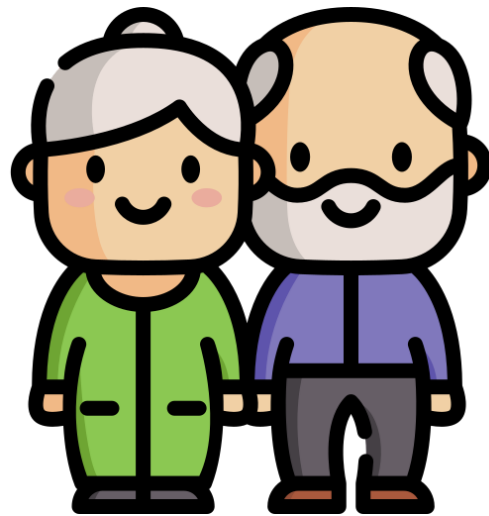

One of the doctors or the nurse asks them to roll up their sleeves to get the vaccine.

The doctor or nurse injects the vaccine into their arm. Getting the vaccine is a little bit sore, but the pain doesn't last very long.

After three weeks, Granny and Grandad go back to get their second dose of the vaccine.

Two weeks after their second dose, Granny and Grandad are fully vaccinated. This means they are much safer and are less likely to get COVID-19.

Soon other grown-ups will have their turn to get the vaccine just like Granny and Grandad.
